

**FOR IMMEDIATE RELEASE**  
**July 25, 2002**

***Cakewalk® Support for Mixed Logic M24 Control Surface in SONAR™ 2.0***

**Cleveland, Ohio-** Mixed Logic has released Cakewalk SONAR support for the Mixed Logic M24 remote control surface hardware. The Mixed Logic M24 control surface features twenty-four touch-sensitive motorized faders, and 53 assignable encoders designed to provide in depth physical control of the virtual workstation-based world.

**Mixed Logic M24 Control Surface Features Available July 25<sup>th</sup> 2002 for SONAR 2.0:**

- Complete Bi directional control and automation of tracks, aux buses and virtual mains
- Dedicated faders, panning, solos, mutes and record enable switches for 24 tracks
- Bank Swapping and Channel Swapping to access all additional tracks
- Additional controls for all 16 effects sends for the currently selected channel
- Extensive real-time control of multiple Direct X 8 plug in effects at once
- Each control displays track name, control name and value to the M24 LCD display
- The LCD also displays 24 scribble strip track names for the selected bank
- Open and navigate windows
- Multiple automation modes with individual channel automation settings
- Jog wheel for navigation, and audio scrubbing
- Complete Transport Control
- Zooming
- Cursor navigation and parameter modification including input and output assignments
- Fader Flip allowing faders to control panning and send levels and plug in effects
